

Chemical Cleaning Services (Pickling & Passivation)

Boilers | Lubrication Lines | Gas System | Fuel Lines

Chemical Cleaning Services

VENEFILTER offers a variety of services to the industry that allow them to improve their systems, maintenance management and increase the reliability of their production lines. During the construction and/or major maintenance process in companies, there is a global trend that points towards the application of chemical cleaning “PICKLING” (Stripping and Passivating) and/or hydromechanical cleaning “FLUSHING”, which allow establishing a start-up of the systems, or processes in a “healthy” manner and thus reduce costs of startups, maintenance, unexpected stops and improve their reliability.

BEFORE | AFTER

What is Pickling?

It is a metal surface treatment used to remove oxide layers, scale, mill scale and corrosion products by recirculating a pickling solution (strong acids with corrosion inhibitor). The process time will depend on the nature of the corrosion or thickness of the contamination. Depending on the system, the removal of fats and oils must be carried out previously, since they prevent the metal-acid reaction.

ANÁLISIS DE FLUIDOS Y SERVICIOS DE TRIBOLOGÍA

Pickling Services

VE NE-PICK®

It specializes in chemical cleaning of hydraulic systems and lubrication, cooling of turbines, compressors, rotating equipment, gas, steam, fuel and boiler systems, which makes us leaders in the area. Executes technology for recirculation of stripping and passivating solutions following the procedures established in ASTM A-380-12 standards. We have teams of different capacities that allow us to meet the requirements and demands of our clients' systems.

Applications and Industries

- ✓ Petrochemistry.
- ✓ Electricity generation.
- ✓ Paper bin.
- ✓ Steel and Mining.
- ✓ Maritime.
- ✓ Among other.

TRIBO-LABS™

It offers the lubricant analysis and tribology service that the industry requires to apply proactive management in monitoring systems, also allowing precise and preventive actions to be taken according to the results obtained. A complete laboratory testing service is offered under ASTM, ISO, SAE, NAS standards, among others. In which it is evaluated: Viscosity, T.A.N.; T.B.N, Oxidation, Additive Package and wear metals, Particle counting, Ferrography, humidity (Karl Fisher), among other moisture contents, others.

“ **100% Satisfaction** of Our Clients ”
